PROFESSIONAL SUMMARY

Applied Data Science graduate (GPA 3.8/4.0, Politeknik Elektronika Negeri Surabaya) with hands-on experience in machine learning, data analytics, and BI dashboard development using Power BI, Tableau, Power Query, Excel, and SQL. Experienced across the full data workflow data collection, cleansing, transformation, validation, and visualization in healthcare, government, oil & gas pipeline integrity, and AI/ML service settings, including physics-informed corrosion rate modeling referencing ASME and NORSOK standards. Seeking to apply strong data management and reporting skills to support Work Packaging System (WPS) operations and dashboard development in a fabrication yard/digital engineering environment.

EDUCATION

Bachelor of Applied Data Science (S.Tr.S.D.T.) — GPA 3.8 / 4.0 2022 – 2026
Politeknik Elektronika Negeri Surabaya (PENS), Surabaya, Indonesia

Natural Science Major 2019 – 2022
SMA Negeri 15 Batam, Batam, Indonesia

WORK EXPERIENCE

Artificial Intelligence and Machine Learning Services Aug 2025 – Aug 2026
Innervate Engineering Limited — United Kingdom (Remote)

- Developed corrosion rate prediction models for oil & gas pipelines on the Horizon pipeline integrity platform, covering internal corrosion physics (NORSOK M-506) and external corrosion physics (AMPP SP0169 / ISO 15589-1).
- Built a Physics-Informed Neural Network (PINN) fusion layer combining internal and external corrosion physics models with a Kalman-based estimator to produce a unified corrosion rate (CR_total) prediction.
- Implemented ASME B31G / B31.8S / B31.4-based remaining strength and probability-of-failure (POF) assessment logic for inline inspection (ILI) data, including a comparison and blending workflow between ML-predicted and code-calculated corrosion growth rates.
- Delivered corrosion analytics models as FastAPI microservice endpoints within the ML backend, handling data preparation, model integration, and API-level result delivery.

Machine Learning Specialist Jan 2025 – Jun 2025
Pusat Data dan Sistem Informasi, Badan Pengusahaan Kawasan Perdagangan Bebas dan Pelabuhan Bebas Batam (BP Batam) — Batam, Indonesia

- Implemented machine learning-based predictive models for the INA-CBGs, Non-CBGs, and Drug Health Claims Management System, deployed as an interactive Streamlit application.
- Prepared, cleaned, and validated healthcare claims datasets to support model training and reporting accuracy.

ACADEMIC PROJECTS

Final Year Capstone Project — SAGE-Desa: Multimodel Predictive System for Farmer Resilience Jan 2026 – Jul 2026
Politeknik Elektronika Negeri Surabaya (PENS) — Surabaya, Indonesia

- Built an end-to-end web-based decision-support dashboard combining classification (Random Forest, Ordinal Logistic Regression), regression (Extra Trees, LASSO), and time-series forecasting (ARIMAX, LSTM, Exponential Smoothing) models for weather and commodity price data.
- Delivered the full analytics pipeline from data collection and preprocessing (feature engineering, VIF-based multicollinearity handling, hyperparameter tuning) to a production dashboard (React, FastAPI, PostgreSQL), achieving 92.4% user satisfaction in acceptance testing.

Data Analyst — Food Production Clustering & Mapping Dashboard

Sept 2023 – Oct 2023

Politeknik Elektronika Negeri Surabaya (PENS) — Surabaya, Indonesia

- Built a clustering model and Power BI dashboard to map and analyze food production data across Central Java.

Data Analyst — Quick Count Dashboard, 2020 Lamongan Regency Election

Aug 2023 – Sept 2023

Politeknik Elektronika Negeri Surabaya (PENS) — Surabaya, Indonesia

Built a Power BI dashboard to estimate proportion parameters for election quick-count results.

Data Analyst — Lecturer Performance Dashboard Development

Aug 2024 – Dec 2024

Politeknik Elektronika Negeri Surabaya (PENS) — Surabaya, Indonesia

- Developed an interactive Tableau dashboard visualizing lecturer performance metrics to help academic managers evaluate and improve teaching quality.

TECHNICAL SKILLS

Programming & Query Languages: Python, R, SQL

BI & Data Tools: Power BI, Tableau, Power Query, Grafana, Excel, Figma, Looker Studio, Node.js

Data & Machine Learning: Machine Learning, Data Mining, Data Warehousing, Predictive Modeling, Data Cleansing & Transformation, Economic Data Analysis, Streamlit, PyCaret

Pipeline Integrity & Engineering Standards: Physics-Informed Neural Networks (PINN), Corrosion Rate Modeling, ASME B31G / B31.8S / B31.4, NORSOK M-506, FastAPI

SOFT SKILLS

Analytical Thinking, Teamwork, Time Management, Problem Solving, Communication

LANGUAGES

Indonesian (Native)

English — PENS English Proficiency Test (PEPT) Overall Score 457

CERTIFICATIONS

- Data Analytics and Visualization with Google Data Studio PENS — (Oct 2023)
- Industry Practitioner of Tableau Desktop, Advanced — PENS (Sept 2023)
- Advanced Power BI for Data Exploration and Visualization — PENS (Aug 2023)
- Advanced JavaScript for Data Exploration and Visualization — PENS (Nov 2023)

ORGANIZATIONAL / COMMITTEE EXPERIENCE

- Consumption and Equipment Committee, Student Management Skills Training — PENS (May 2024)
- Guest Lecture Committee on Analytics and MLOps in Data Science — PENS (Sept 2022)
